

Day-011 Python Practice Sheet

Topics: Functions, Lambda, Map()

- Q1. Create a function to print your name.
- Q2. Create a function that adds two numbers.
- Q3. Create a function that returns the square of a number.
- Q4. Create a function to check whether a number is even or odd.
- Q5. Create a function to find the largest of three numbers.
- Q6. Create a function that counts the number of vowels in a string.
- Q7. Create a function that checks whether a string is a palindrome.
- Q8. Create a function that returns the factorial of a number.
- Q9. Create a function that returns the sum of all elements in a list.
- Q10. Create a function that prints the multiplication table of a given number.
- Q11. Use a lambda function to square a number.
- Q12. Use a lambda function to add three numbers.
- Q13. Use a lambda function to check whether a number is even.
- Q14. Use a lambda function to return the larger of two numbers.
- Q15. Use a lambda function to calculate the cube of a number.
- Q16. Double every number in the list: [1,2,3,4,5].
- Q17. Square every number in the list: [2,4,6,8].
- Q18. Convert all names to uppercase using map().
- Q19. Find the length of every word using map().
- Q20. Convert Celsius to Fahrenheit using map().
- Q21. Create a list of cubes using map().
- Q22. Multiply every element by 10.
- Q23. Add 5 to every element.
- Q24. Convert every integer into a string.
- Q25. Find whether each number is Even or Odd.
- Q26. Use map() with two lists to add corresponding elements.
- Q27. Use lambda to sort a list of tuples based on the second element.
- Q28. Create your own calculator using functions.
- Q29. Create a menu-driven program using functions.
- Q30. Create a function that returns Maximum, Minimum, Sum and Average of a list.

Git Commit: git commit -m 'Day 11: Practiced Python Functions, Lambda and Map()'
